

SVEA KANAL – a two-way channel for business support between Scandinavia and west Balkan regions.

Business consultancy – where we offer support when establishing business, B2B, market activity and the other ways for support on Scandinavian as well on Balkan Market.

Agency – representing Scandinavian innovative technique in the energy efficiency sector and environment protection in region of West Balkan.

Our ambition is to be natural channel for small and mid size companies which are doing business in Scandinavia and West Balkan – and who wants access to the other market. Svea Kanal channel business activity between these regions.

Nordic Days in Croatia 2008 – Energy Efficiency & Environment

The fifth Nordic Days in Croatia is the meeting place of companies, organizations and professionals from Denmark, Finland, Iceland, Norway, Sweden, Croatia and the south east Europe. The sectors in focus this year are energy efficiency, fossil fuels, renewable sources, waste and wastewater management and environmental protection.

The Nordic Days is a well balanced business concept, combining business-to-business meetings, seminars, workshops, field trips, "speed-meetings" and recruitment opportunities.

Svea Kanal is co-organizer of the Nordic days in Croatia 2008 and welcome you to a unique business concept in the field of - Energy Efficiency & Environment. The Nordic Days will take place in the Zagreb Fair the 24 - 25 of November

We are looking forward to your participation! Please visit www.nordicdays.info

World Bio Energy 2008 in Jönköping, Sweden

Svea Kanal accompanied by Hrvatska Sume Biomasa, Proventus Strategije d.o.o., Iverak d.o.o. and Kirka-Suri visited the World Bioenergy Conference in the end of May. The concept "taking you from know-how to show-how" with regards to biomass and bio fuels was the third world conference arranged by the Swedish Association of Bio energy. The event gathered professionals in the bio energy sector world wide. in order to promote techniques to meet the future demands on the energy situation and at the same time decrease the impact on the environment.

Mr. Željko Šučić, Šumska

Biomasa said : "It was a very interesting event where we had the opportunity to meet with experts in the field of biomass which is of interest for Hrvatska Sume. The conference provided us with an excellent mix of seminars, B2B-meetings, field excursions and hands on meetings with professionals who have an impressive experience in this sector."

New innovative techniques in Svea Kanal portofolio

Svea Kanal has signed an agreement with SRE (Swedish Smoke gas Condensation) to represent SRE in the west Balkan region. The SRE technical solution provides energy efficiency in biomass fired hot water boilers. Through a combination of low temperature dryer of the bio fuel and condensation of the smoke gases energy efficiency raises by 30-40 %. Emissions are taken down to a minimum, normally from i.e. 250 mg/m³ to around 5-10 mg/m³, by using a scrubber and a wet electrical precipitator. SRE has gained great market growth in the Nordic and surrounding countries. SRE are looking forward to their first reference in the west Balkan region. Through advantageous finance and great fuel savings an SRE installation will pay off from day 1. Please visit www.sveakanal.com

Current references

Aerovit – cleaning system on compressed air (shock-blast) for flame tube and hot water boilers in land and marine applications (0,5-30 MW). Aerovit was awarded with a second gold medal in the Polish Intereco-Ecodome 2008 in Katowice.

The first Aerovit installation in operation on vessel Split, Jadroplov. The Chief engineer of vessel Split: "Our exhaust gas boiler from engine which use heavy oil 380 cst is usually cleaned every 700-1000 hrs. After installation of Aerovit we did not clean boiler even it exceed 1000 hrs of work. We have inspected the boiler after 700 working hrs . All tubes were clean and Aerovit fulfill its function." Chief engineer is extremely satisfied with Aerovit performance.

Svea Kanal and OKR Cleaning can now offer you a test system consisting of one single valve and a pressure vessel suitable for your needs. If you have interest in the technique, this is a perfect opportunity to evaluate the efficiency and compare the results by your self, says Sören Amby Jensen, Key Account Manager at OKR Cleaning A/S. Contact Svea Kanal for more info regarding the test systems.

Infracone – cleaning system operating on infrasound for flame tube and hot water boilers in land and marine applications. Since October 2007 the Infracone system has been in operation on vessel Zrinski, Tankerska Plovidba. Comment from the superintendent on Zrinski, Mr. Branimir Maricic: "Before installation we stopped the boiler for cleaning once every month. Since the installation of Infracone we have not stopped even once since the installation 8 months ago. The performance is excellent and is already paid back taking all previous stoppages in to account." For more information about the techniques and request for quotation please contact Svea Kanal.
